

Virtelon

User Manual — How to Use Your Dashboard

A simple, step-by-step guide to finding businesses,
checking their online presence, writing them a message
with AI help, and sending it — all from one place.

Written in plain English. No technical background needed.

12. Common Questions

1. What is Virtelon?

Virtelon helps you find local businesses that need your services (like a website, Google listing, or social media help), and reach out to them the smart way.

Here is the whole idea in one line:

THE IDEA

Virtelon finds businesses near you → checks if they have a website → scores how good a customer they'd be → writes them a personal message using AI → you read it, approve it, and send it yourself on WhatsApp.

Nothing is sent automatically. You are always the one who reviews the message and hits "send." Virtelon just does the boring research and writing for you.

Who can do what

Every person on your team has a role. This decides what they can see and do:

Role	What they can do
Owner	Everything, including billing and deleting the account.
Admin	Everything except billing.
Manager	Find leads, run campaigns, approve and send messages, view analytics.
Sales	Work only on the leads assigned to them — update status, add notes, send approved messages.
Viewer	Can look around, but can't change anything.

2. Logging In

- 1 Open the website address your team gave you (this is your Virtelon link).
- 2 Type in your email and password, then click **Sign in**.
- 3 First time here and someone invited you? Use the link they sent you — it says "**Join [Company Name]**" — and set your own password there.
- 4 No account yet and you're setting this up for the first time? Click "**Create an organization**" on the sign-in page and fill in your company name, your name, email, and a password.

TIP

You can switch between light and dark screen colors any time using the button at the bottom of the left-side menu.

3. The Dashboard — Your Home Screen

This is the first screen you see after logging in. Think of it as your morning briefing.

What you see at the top

Box	What it tells you
Total leads	How many businesses you've found so far, with a small trend line.
Discovered today	New businesses found today.
High priority (75+)	Businesses that scored 75 or higher out of 100 — call these first.
Have a website	What percentage of your leads already have a website (the rest are your best pitch).

The Pipeline

This is a row of six boxes showing how your leads move forward, step by step:

Discovered → Researched → Scored 70+ → Contacted → Replied → Won

Each box shows how many leads reached that stage, and the small percentage next to each one tells you what share of the previous stage made it to this one. If that number drops a lot at one stage, that's the part of your process worth improving.

"Needs your attention"

A short list of things worth doing right now — like hot leads (score 90+) nobody has contacted yet, or messages waiting for your approval.

4. Finding New Businesses (Leads)

Click **Leads** in the left-side menu.

Option A — Search for businesses automatically

- 1 Click **Discover leads**.
- 2 Type a **Category** — the kind of business, e.g. "Dentists", "Gyms", "Restaurants".
- 3 Type a **Location** — the city or area, e.g. "Pune" or "Andheri, Mumbai".
- 4 Choose **How many** results you want (up to 50 at a time).
- 5 Click **Discover** and wait a few seconds. The businesses found will appear in the table below.

GOOD TO KNOW

Virtelon uses a free, no-cost map service (OpenStreetMap) to find businesses by default. It's real data, but it doesn't have star ratings the way Google does, and some phone numbers may be missing — that's the trade-off for keeping this free.

Option B — Bring your own list

Already have a spreadsheet of businesses? Click **Import from CSV** on the Leads page, choose your file (it needs at least a "businessName" and "category" column), and Virtelon will add them all in.

Reading the Leads table

Column	Meaning
Score	0–100. Higher means a better opportunity — usually no website, decent business, easy to contact.
Website	"Yes" or "Missing" — no website is often your best opening line.
Social	How many social media profiles were found for them (Instagram, Facebook, etc.)
Status	Where this lead is in your process — New, Qualified, Contacted, Replied, Won, and so on.

Click any business's name to open its full page.

5. Looking at One Business Closely

Clicking a lead's name opens its detail page. Here's what each part means and does.

Top info card

Phone, email, website, address, and when it was found — all in one place.

Lead score breakdown

Instead of just one number, you can see *why* it scored that way — things like "Website opportunity", "Business quality", "Online presence opportunity". A longer bar means that signal is stronger.

Status

Change where this lead is in your process — New, Qualified, Contacted, Interested, Won, Lost, and so on. This keeps your team's records accurate.

Assigned to

(Managers and above only) Pick a teammate to own this lead. It will show up for them to work on.

Contacts

Add the actual person you'll be talking to — the owner's name, their phone, their role — since a "business" is really just people.

Online presence research

- 1 Click **Research** (Managers and above).
- 2 Virtelon visits their website (if they have one) and checks: does it load fast? Is it mobile-friendly? Does it show up well on Google? It also looks for their social media pages.
- 3 You'll see a plain-English list of strengths, problems, and opportunities — this is useful material for your pitch.

6. Letting AI Write the Message

Once a lead has been researched (or even before, for basic leads), you can ask the AI to study everything known about the business and draft a personal outreach message.

- 1 On the lead's page, find **Generate AI analysis & outreach**.
- 2 Pick a **tone** (friendly, formal, concise, professional, or Hinglish) and a **language** (English, Hindi, or Hinglish).
- 3 Click **Generate**. In a few seconds you'll see: the AI's reasoning, the business's pain points, a recommended service to pitch, and a ready-to-send draft message.

IMPORTANT

The AI only writes about things it can actually see (like "no website found") — it never invents facts about a business. If something looks off, you can always edit the message before sending.

7. Sending the Message on WhatsApp

Virtelon does **not** send WhatsApp messages by itself — that's on purpose, so nothing ever goes out without a human checking it first. Here's the flow:

- 1 On the lead's page, under the AI draft message, click **Queue for outreach**.
- 2 Go to **Outreach** in the left menu. Your message is now waiting there as *"Pending approval."*
- 3 A Manager (or Owner/Admin) reviews it and clicks **Approve**. It becomes *"Queued to send."*
- 4 Click **Open in WhatsApp** — this opens WhatsApp with the business's number and the message already typed in for you.
- 5 Check the message one last time and hit send *inside WhatsApp yourself*.
- 6 Come back to Virtelon and click **Mark sent** so your records stay accurate.

WHY THIS MATTERS

This keeps you fully compliant — Virtelon never automates WhatsApp or sends anything without a person approving and pressing send. It's the message-writing that's automated, not the sending.

8. Campaigns — Organizing Your Search

A campaign is a saved search — for example, "Dentists in Pune" — with its own daily target and minimum score. It's useful when you're focusing on one type of customer for a while.

Creating a campaign

- 1 Go to **Campaigns** → **New campaign**.
- 2 Give it a name, a category, and a location.
- 3 Set how many leads you want per day, and the lowest score you'll accept.
- 4 Choose a mode: **Manual** (you click Discover whenever you want), **Approval required**, or **Automated** (it searches for new leads by itself, once a day, without you lifting a finger).

Open any campaign to see its own leads and run discovery just for that search.

9. Analytics — How Are You Doing?

Click **Analytics** in the left menu for the bigger picture:

- **Leads discovered** — a chart of how many businesses you've found each day over the last month.
- **Lead score distribution** — how many leads fall into each score range, so you can see if you're finding mostly great leads or mostly weak ones.
- **Website presence** — a circle chart showing how many leads have no website (your opportunity), already have one, or are unreachable.
- **Campaign performance** — compares your campaigns side by side: found, contacted, won.
- **Top categories** and **By city** — which business types and cities are giving you the best results.

10. Your Team

- 1 Go to **Team**.
- 2 Click **Invite teammate**, type their email, and choose their role (see the table in Section 1).
- 3 Since no email service is connected yet, you'll get a link to copy — send that to them yourself (WhatsApp, email, however you like). They'll use it to set their own password.

11. Settings — What You Sell

Go to **Services** in the left menu. This is your list of what you offer — website design, Google listing setup, social media management, and so on.

WHY THIS MATTERS

The AI reads this list before writing every message. The more clearly you describe your services (who they're for, what problems they solve), the better and more relevant the AI's pitch will be.

Under **Settings → Organization**, you can update your company name and default language.

12. Common Questions

How many businesses will I actually find?

It depends on the category and city, but a search for something common (like doctors or restaurants) in a mid-size city typically returns dozens of real results per search. You can run searches as often as you like.

Why don't some leads have a star rating?

Virtelon's free search source (OpenStreetMap) doesn't track star ratings the way Google does. This doesn't affect the lead's score — a missing rating is simply treated as "unknown," not "bad."

Can I message someone automatically without checking first?

No — and this is intentional. Every message goes through Approve → Open in WhatsApp → you personally hit send. This keeps you safe from spam complaints and keeps every message accurate.

What if I don't have any services set up yet?

The AI will still analyze leads and draft general messages, but it won't recommend a specific service until you add at least one under **Services**.

I'm a Sales role — why can't I see the "Discover" button?

Only Managers and above can search for new leads or run AI analysis (these use paid or limited resources). Sales team members work on the leads assigned to them — updating status, adding notes, and sending already-approved messages.

Something looks wrong or broken — who do I tell?

Contact whoever manages your Virtelon account (usually your Owner or Admin) with a description of what you were doing and what you saw.
